

Masslogics

Software that keeps your business running

Masslogics is a software system specifically designed for small to medium sized trucking businesses. Masslogics is web-based which means that there is no software to download, and can be accessed from *any* computer, *anywhere*, through an Internet connection. The system manages your customers, drivers, equipment, jobs and invoicing. It holds all your data in one place so there is no need to run separate software or spreadsheets to manage various tasks. Here are just some of the features included:

- Dispatch board for managing jobs
- Built-in mileage calculator for pricing
- Customizable rates for each customer
- Customizable fuel surcharge calculator
- Automated e-mails to customers when jobs are completed
- Create customer invoices and driver settlements in minutes
- Easy report generator that produces up to the minute data on operations, as well as archived operations
- Track invoices, receivables, and set customer credit limits
- Set alerts for items such as drug testing or equipment inspections
- Quick and easy search for jobs completed months or years ago

Comparable systems providing the same features cost \$10,000-\$25,000, plus \$3000-\$5000 for server hardware, plus 15-20% annual maintenance. Masslogics requires no up front costs, no server hardware, and maintenance, upgrades, backups and security are all included in a low monthly subscription.

By keeping everything simple, accessible and efficient, Masslogics saves time and increases profits!
